

GTA San Andreas Stories 1987 — Installer Guide & Credits

v2607.0 — Built by the SAS 1987 Team

Fan-made tool. Not affiliated with Rockstar Games or Take-Two Interactive.

GTA San Andreas is required and must be legally purchased.

Introduction

This document is the canonical reference for the GTA San Andreas Stories 1987 Installer — a fan-made Python tool that builds a fully portable, standalone modded San Andreas install.

For end users: You only need to read the Credits section to understand who built what.

For developers: Jump to the Fork Guide to rebuild, modify, or extend the installer.

Credits & Attribution

GTA San Andreas Stories 1987 — Mod Team

This installer exists only to make it easier to install the GTA San Andreas Stories 1987 total-conversion mod. All credit for the mod itself belongs to its development team.

Project Lead

Name	Role
cerdopalo	Project Creator & Lead

Mod Team

Name	Contribution
Rule Breakers	Mappings and models
Cheseg Remastered	Missions and feedback
Karammii	Testing and billboards
Abdullah	Missions, models, scripts, testing
NorthStationX	Billboards and retextures
Nightlaw	Screenshots, testing, trailer clips
FrankoU	Manual writing and mappings
Mike	Missions and feedback
GTAMissionsCreator	Video recording and testing
bolszewik	Testing and screenshots
14todoeltiempodc	Retextures
Elrico	Testing, feedback, screenshots
Tix	Mission testing and screenshots

DYOM — Design Your Own Mission

Name	Role
Dutchy3010	DYOM co-creator
PatrickW	DYOM co-creator

CLEO Library

Name	Role
Seemann	CLEO Library creator
Alien	CLEO for GTA SA
Deji	CLEO for GTA SA
LINK/2012	ModLoader

CLEO+

Name	Role
Junior_Djjr	CLEO+ creator, MixMods founder

NewOpcodes

Name	Role
DK22Pac	NewOpcodes, plugin-sdk

Special Thanks

- Rockstar Games — For creating GTA San Andreas
 - The GTA modding community — For keeping this game alive

Supporting Mods

The GTA SAS 1987 mod already bundles all required dependencies. The installer offers these as optional extras for users who want to update them independently.

Mod	Source	Author	License
CLEO 5	github.com/cleolibrary/CLEO5	CLEO Library team	BSD 3-Clause
CLEO+	github.com/JuniorDjjr/CLEOPlus	JuniorDjjr	See repo README
NewOpcodes	mixmods.com.br	DK22Pac	See MixMods page
DYOM 8.1	Bundled in main mod	Dutchy3010 & PatrickW	Free for personal use

Tools & Services

Service	Used for
LibertyCity.net	Fallback search when main mod isn't on official site
MixMods.com.br	Original article pages for CLEO+ and NewOpcodes
GitHub	Source hosting for CLEO 5, CLEO+
MediaFire	Hosts the official GTA SAS 1987 main mod archive
Pricedown BI font	The actual GTA logo typeface (free for commercial use)

Python Dependencies

Library	Author	License
PySide6 (Qt6)	The Qt Company	LGPL v3
requests	Kenneth Reitz	Apache 2.0
beautifulsoup4	Leonard Richardson	MIT
py7zr	Hiroshi Miura	LGPL-3.0

Legal Disclaimer

This installer is a fan-made tool and is not affiliated with, endorsed by, or sponsored by Rockstar Games, Take-Two Interactive, or any of the mod authors listed above.

- GTA San Andreas is a trademark of Rockstar Games / Take-Two Interactive
- You must own a legal copy of the game to use this installer
- The installer does not distribute the game, mod, or copyrighted assets
- It only downloads them from official sources at install time

If you are a copyright holder and believe any part of this installer infringes your rights, please open an issue and we will address it promptly.

Fork Guide — How to Rebuild the Installer

This section is for developers who want to fork, modify, or extend the installer.

1. Project Layout

```
installer.py – Application entry point
src/
config.py – Mod URLs, version constants, cache paths
cache.py – Shared cache manager
sa_detector.py – Locates GTA SA install (registry/Steam/paths)
scraper.py – Scrapes gtasas.netlify.app for live mod URLs
downloader.py – HTTP downloader + link resolvers
extractor.py – Archive extraction + merge into SA root
backup.py – Backup originals to .zip
installer_stages.py – Install pipeline (copy → backup → mods)
screenshot_cache.py – Download mod screenshots
settings.py – Persistent user settings (JSON)
util.py – Cross-platform helpers
ui/
theme.py – VCS dark-green palette + Pricedown font
wizard.py – QWizard subclass + page wiring
welcome_page.py – Welcome + backup checkbox
mod_source_page.py – "I have mods" vs "Download for me"
setup_page.py – Source SA + destination folder
prereqs_page.py – Mod selection grid
install_page.py – Progress + log during install
complete_page.py – Summary + launch button
credits_window.py – Credits/attribution window
cleanup_dialog.py – Post-install cleanup
splash/ – Slideshow images (any .png added appears in slideshow)
data/
exe_hashes.json – SA exe version detection (optional)
fonts/
PricedownBl.otf – GTA logo font
tools/
build_release.py – Build versioned release archives
render_pages.py – Render wizard pages to PNG for screenshots
```

2. Data Flow

1. User clicks through wizard pages, setting properties on the wizard
2. InstallPage reads all properties and constructs an ``InstallContext``
3. Context is passed to ``installer_stages.run_full_install()`` on a worker thread
4. Stages run sequentially: copy SA → backup → install mods
5. Each stage reports progress via callback (Qt signals back to UI thread)

Mod install order is determined by `install_order` field on each `ModSource`:

- CLEO 5 (#10)
- CLEO+ (#20)
- NewOpcodes (#30)
- DYOM (#40)
- GTA SAS 1987 main mod (#100)

3. Adding a New Mod

1. Add a `ModSource`` entry to `src/config.py``
2. Set `install_order`` to control when it runs
3. Set resolver flag: ``is_mediafire`, `is_github_release`, `is_article_page`, or `is_libertycity``
4. If new host, add resolver to `src/downloader.py``
5. Test with full install

4. Adding a New Wizard Page

1. Create `src/ui/my_new_page.py``, subclass `QWizardPage``
2. Set `splash_image_name`` class attribute (any .png in `src/ui/splash/``)
3. Add `PAGE_ID`` constant to `src/ui/wizard.py``
4. Register page in `InstallerWizard.__init__``
5. Update `nextId()`` of preceding page

5. Building the Standalone .exe

```
# Install dependencies
pip install -r requirements.txt
pip install pyinstaller>=6.0

# Build
python -m PyInstaller installer.spec --noconfirm

# Output
dist/GTA_SAS_1987_Installer.exe
```

6. Building a Release Archive

```
python tools/build_release.py
```

Output: dist/GTA_SAS_1987_Installer_v2607.0.7z

7. Customizing the Theme

- Colors: Edit `COLOR\_` constants in `src/ui/theme.py`
- Stylesheet: Edit QSS in `theme.py`
- Slideshow: Add any `.png` to `src/ui/splash/`

8. Testing

```
# Syntax check
python -m py_compile installer.py src/*.py src/ui/*.py

# Scraper test
python -c "from src import scraper; print(scraper.resolve_mod_sources())"

# Full test
python installer.py
```

9. Licensing

- **Installer code:** MIT or Apache 2.0 recommended
- **PySide6 (Qt6):** LGPL v3 — free for commercial use
- **Pricedown BI font:** Free for commercial use (keep FONT_LICENSE.html)
- **Mod:** Property of its authors — download only, don't redistribute
